CATTLE AND CALVES ON FEED, SELECTED STATES, BY QUARTERS,  
1950-55, REVISED ESTIMATES

This report presents, by States, revised estimates of the number of cattle and calves on feed for market by quarters for 1950-55. Detailed data showing classes of cattle, their weight, and the length of time on feed are also included.

The program of quarterly estimates of the number of cattle on feed was started in 3 States (Illinois, Iowa, and Nebraska) in 1948. Idaho was added in 1950 but estimates only for January 1 and April 1 were made since most of the feeding in Idaho is during the winter months. Quarterly cattle on feed estimates were started in California in January 1953 and in 9 additional States in October 1954. These 14 States accounted for approximately 88 percent of the number of cattle on feed on January 1, 1955.

Estimates relate only to cattle and calves being fattened for market as a more or less distinct agricultural enterprise, and exclude small operations incidental to dairy and general farming. Cattle thus fed are presumed to produce carcasses that will grade good or better. In addition, there have been a number of cattle finished on distillery slop, mostly in Kentucky, and on by-product feeds in other States not shown, as well as large numbers being winter fed in West Virginia, Virginia, Kentucky and some other States to be marketed as grass fat in late summer.

Dashes (—) shown in the following tables denote that data are not available and should not be assumed to mean zero.

Table 1.--Cattle and calves on feed by States, January 1, 1950-55
